ELECTROSTATIC SANITIZATION

WHAT IS IT?

Electrostatic Disinfection is a new technology used to sanitize and disinfect spaces. A spray gun evenly covers all of the surfaces for a 360 degree complete clean, with a hospital grade disinfectant. It is the most effective way of protecting you, your customers and your staff.

HOW DOES IT WORK?

This method atomizes Oxivir to produce an electrically charged spray able to wrap around surfaces for an even coating- even those hard to reach areas and undersides of chairs, desks, tables, etc. The spray attaches to unwanted negatively charged particles, which are then disinfected to kill any unwanted bacteria, viruses, mold, and spores.

BENEFITS

HIGH-TOUCH POINTS ARE COVERED

Disinfecting services include sanitizing high touch points areas and surfaces; door handles, dispensers, faucets, elevators, handrails, conference rooms, break rooms, phones, kitchens, restrooms, and more!

STOP THE SPREAD OF GERMS & ILLNESS

Keep your business running safely with electrostatic disinfecting services. One time, emergency call-outs, weekly disinfecting plans; we have the solution for serious infection prevention and control.

HOSPITAL-GRADE DISINFECTION

Hospital Grade, EPA Approved cleaning and disinfecting products and adhere to all CDC guidelines, including Personal Protective Equipment.
